SMART SOLUTIONS

Systematic Feeding Solutions Leader

Company Introduction

Ningbo Haitian Smart Manufacturing Technology Co., Ltd. is affiliated to Haitian Plastics Machinery Group Co.,Ltd. which is the world's largest injection molding machine manufacturer. The company focuses on integrated updating of integration, automation and information level of injection molding machine. Since the beginning of this century, Haitian has been holding the principle of market segmentation and industry segmentation, and pay attention to industry cases applications. It provides customers with services of factory planning and design, raw materials centralized processing, auxiliary systems integration, production automation implementation and injection molding plant information networking etc.

Based on the concepts of production automation and informatization, as well as technology and scale advantages formed over the years, "Haitian Smart" focuses on the process of manufacturing and production organization. We provide customers with five series of solutions in the field of intelligent manufacturing. There are "Production Preparation Module", "Process Assurance Module", "Product Processing Module", "Sorting & Logistics Module" and "Information Interconnection Module". It realizes intelligent control of raw material flow, energy flow, goods flow and information flow in the process of production and operation, and helps customers to improve management level, increase production efficiency, reduce production cost and maximize benefits.

Ningbo Haitian SMART Manufacturing Technology Co., Ltd. takes the concept of "smart manufacturing shaping the future" as its vision, and regards "Synergy of multi-technology to create value for customers" as its business philosophy. Following up with development trend of the industry, we provide customers with solutions for entire life cycle of injection products based on market demand.

Centralized feeding system

Application field

The system is mainly used in plastic manufacturing area of important industries, such as automobile, home appliances, daily necessities, medical equipment, aviation, PV and extrusion /blow molding etc.

SMART SOLUTIONS

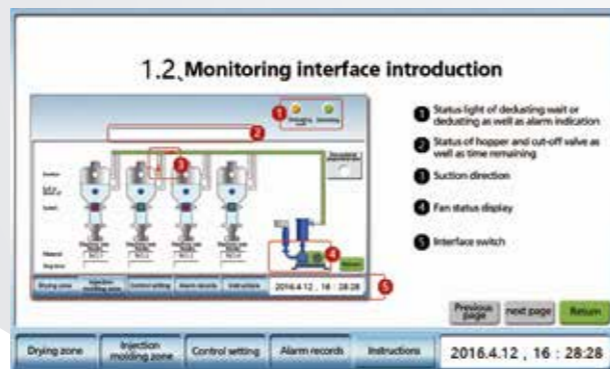

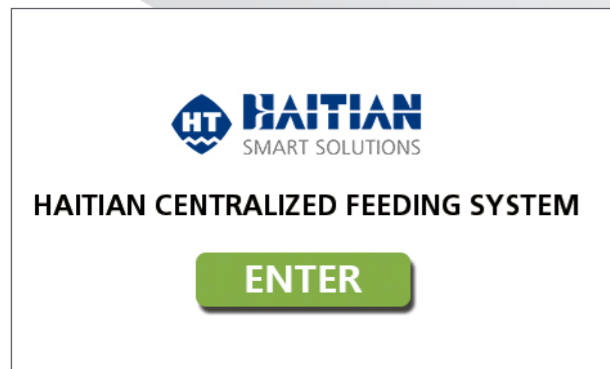

Centralized feeding system

What is centralized feeding system

It is a fully automatic intelligent control system that can save energy and reduce both noise and pollution. After centralized storage processing of raw materials, one-to-many automatic controller conveys a variety of raw materials as per demand to each machine through a closed conveying system.

Advantages

Design flexibility, durability, long life cycle;
 Can feed to multiple machines simultaneously and change raw materials easily and quickly;
 Saving power and water;
 Workshop environment will be improved, no contamination, lower ambient temperature;
 Centralize management and reduce labor force;
 Low energy consumption, varieties of raw materials can be dried at the same time;
 Small footprint, saving space;
 System operation is simple and easy to learn, with extensibility, low update cost, with cost advantages and rapid delivery;
 Stable product quality, high capacity and security, low maintenance, with a variety of intelligent monitoring and protection function; promoting modern company image.

HTDL-50F-P

Introduction

Can generate dry wind air dew point of -40 °C, combined function of dehumidification, drying and feeding, good appearance, simple and reasonable structure design, easy maintenance; Used for high hygroscopic engineering plastics, such as: PA.PC.PBT.PET.ABS, etc.

Features

With LCD touchscreen, drying process is accurately controlled through PID automatic calculation; Double layer insulation hopper dryer which is completely made of stainless steel adopts a down blow pipe design to ensure that heat is not lost and drying temperature is maintained, so drying efficiency is improved.

With alarm and protection function of over-temperature, motor overload and reverse phase.

Combination function of dehumidifying, drying and three-stage feeding. Three feeding models are optional according to actual demand, one-to-one machine, one-to-two machines and one-to-three machines.

With RS485 communication interface, the system can communicate with the host to achieve centralized monitoring.

Optional Items

1 vs 3 feeding modules : 1 vs 2 machines and 1 vs 3 machines are optional.

Dew point meter is optional

Note

Standard voltage specifications: 3 phase 380V / 50Hz;

If need to customize special specifications, please contact with us for confirmation;

Product specifications are subject to change without notice.

HTD Honeycomb dehumidifier

HTD - AAAF - P

HTD-200F-P

Introduction

Can generate dry air with dew point of -40 °C, combined function of dehumidification, drying and feeding, good appearance, simple and reasonable structure design, easy maintenance;
Used for high hygroscopic engineering plastics, such as: PA.PC.PBT.PET.ABS, etc.

Features

With P.I.D temperature controlling system, temperature of regeneration and drying is accurately controlled. Microcomputer control board with LCD touch screen, easy to operate, can control machine to run automatically.
The dehumidification system is designed as cooler structure to ensure lower return air temperature and dew point. With alarm function of motor overload and reverse phase, service life of motor can be well maintained.
With return air filter, honeycomb rotor is not contaminated by raw material dust.
With molecular sieve type honeycom, dehumidification performance of which is better than that of silicone adsorption type.
With RS485 communication interface, the system can communicate with Haitian injection machine to achieve centralized monitoring.

Optional Items

Drying heater is optional
Dew point meter is optional

Note

Please tell us the length of hot air pipe to be connected when ordering
Please tell us the installation dimension of blower inlet and elbow outlet when supporting other brand dryer.
Standard voltage specifications: 3-phase 380V / 50Hz;
If need to customize special specifications, please contact with us for confirmation;
Product specifications are subject to change without notice.

HTHD Hopper dryer

HTHD - AAA - BBB

BBB:EM=Magnetic base
ET=24-hour timer
ETM=24-hour timer+Magnetic base

AAA: Loading capacity (Kg)

HTHD: Hopper dryer

HTHD-50E

Introduction

The HTHD series hopper dryer is the most effective and economical machine model for drying plastic materials which are moist due to packaging, transporting or recycling. Direct-junction design is suitable for directly mounting on plastic molding machine for drying, which is quick and space-saving. This type of up-blowing hot air dryer can provide loading capacity from 12 to 1,000 kilograms.

Features

- Novel design and bright appearance;
- The hot air is evenly distributed and drying efficiency is improved;
- Controlled by Full digital P.I.D;
- All parts inside and cylinder adopt stainless steel;
- The cylinder is separated from the bottom, easy to clean and reload quickly;
- Overheat protection device can reduce accidents caused by human or mechanical failure;
- Standard main power switch & over-temperature trip protection (ET model);

Optional Items

- Exhaust air filter, fan inlet filter, magnetic base, magnetic frame, hot air collector, bracket, mobile collection container, suction box and other accessories are optional;
- Double insulation function is optional;
- Hlink networking function are optional;

Note

- With 24 hour timer, add "T" into model name;
- Install magnetic base, add "M" into model name;
- The loading capacity is based on standard plastic raw materials with particle diameter 3-5mm and bulk density about 0.65kg/L;
- Specified voltage is required for power supply;
- If need to customize special specifications, please contact us for confirmation;
- Product specifications are subject to change without notice.

HTLD Drying Loader

HTLD-AAA-BBB-CCC

Introduction

For HTLD drying loader, dryer and loader are combined together by L-shaped bracket. It is equipped with suction box and bracket casters for easy movement. The combined function of drying and feeding is convenient for customers to use directly.

Features

For configuration of drying section, please refer to dryer introduction; For configuration of loading section, please refer to vacuum loader introduction; Standard configuration includes L-shaped bracket and single-pipe suction box;

Optional Items

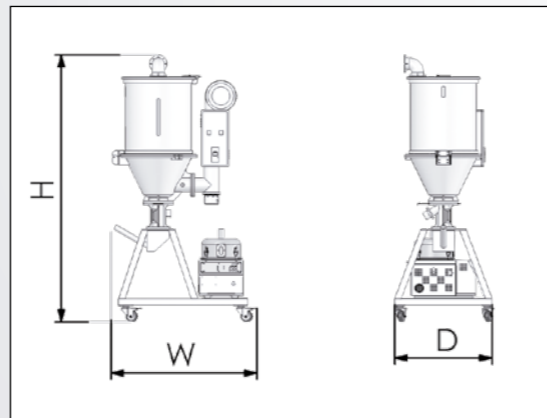

Exhaust air filter, fan inlet filter, magnetic base, magnetic frame, hot air collector, bracket, mobile collection container, suction box and other accessories are optional; Double insulation function is optional; HLINK networking function are optional;

Note

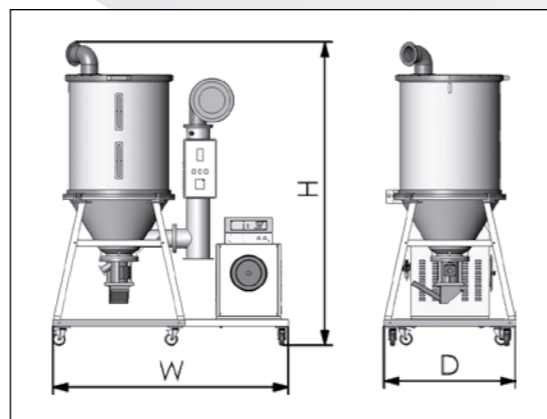

Specified voltage is required for power supply; If need to customize special specifications, please contact us for confirmation; Product specifications are subject to change without notice.

HTCM Volumetric Screw Doser

HTCM - AXAX - P

Series Number
Motor function (HP)
Volumetric Screw Doser

Introduction

HTCM series volumetric screw doser is suitable for automatically proportional metering and feeding of new material, regrind master batch or additives in plastic molding production. The series models adopt high-precision stepper motors. All conditions are automatically converted into rotation speed by all-digital microcomputer control system, according to preset ratio and parameters. Precise metering screw, which is made of SUS304 stainless steel, driven by coupling and is used for adding certain amount materials into injection molding machine or extruder. The material like master batch, degraded material, additives or assistant etc., metering error is not more than 1%. A variety of types and diameters of metering screws are optional, providing 0.1-100kg / h output. In order to meet needs of different occasions and fields, two-color, three-color and four-color mixers are also available.

Features

- Stepping motor, no need to maintaining. It has protection function of material block, voltage undervoltage, overvoltage, overcurrent and disconnection, which ensure continuous operation of the machine;
- The controller can permanently record and store 50 groups of data to facilitate management of molding conditions and recipes;
- Adapt with dry contact and voltage of the injection molding machine, Multiple input signal including 0-5V, 0-10V, 4-20MA, 2-20MA, frequency, digital are available for extruder, almost covering all of plasticizing signals of plastic molding machine;
- Modular type assembly structure, easy to disassemble and install, can quick reloading materials;
- It can be used for synchronous acceleration or deceleration of extruder main screw;
- The unique compensation optimal design of controller ensures that additives metering is always accurately;
- With off-line simulation function, additives can be quickly adjusted to desired amount during equipment commissioning, reducing material loss and greatly saving manpower;
- For controller with extended function, weighing control module is optional to realize digital controlling of proportional adding of material, ensuring measurement accuracy in great extent;
- Reinforced installation base with improved design feeding facility can ensure that large amount of color master batch can be used normally, even if a large amount of recycled materials;
- With RS485 communication interface, can communicate with Haitian injection molding machine to realize centralized monitoring.

Specification

Max. output	kg/hr	0.2~2	0.7~6	1~16	1.5~27	3.6~50	Refer to left
Color hopper	Ltr	10					
Intermediate hopper	Ltr	optional MIH18/24					
Mixing motor power	kW	0.9(optional)					
Mixing chamber capacity	Ltr	3L or (6L optional)					
Voltage		1Ø,220VAC, 50/60Hz					

Dimension			
H		551/711 (With mixer)	
W	mm	582	984
D		278/459 (With mixer)	

Optional Items

- Heavy-duty base (HF-2) is required when using HTHD-100~300. And heavy-duty base (HF-3) is for HTHD-400~600.
- High temperature type metering screw doser HTCM-PET is for PET high temperature applications, cooling water must be normal temperature water for this model.
- Y-type recycle material seat is optional for demand of two material proportional production
- Blender (MX3 or MX6) is optional to meet dual mixing requirements, dual station is equipped with 3L.
- Main hopper (MIH) is optional for adding main raw materials
- Low level indicator (LS) is optional for early warning of lacking of master batch.
- 30mm diameter screw is optional for demand of large output applications
- Loading bracket (SF) is optional to be used with suction machine installed on the master batch mixer
- Compressed air loader (VL) is optional to meet low noise and high precision conveying.

HTGB Gravimetric Blenders

HTGB - AAA - BBB - P

HTGB-5-4

Introduction

The HTGB Series gravimetric blender is suitable for applications where multiple raw materials are required for precise proportional mixing by weight. The controller of this series has high accuracy control system and adopts adaptive algorithm. It can automatically repeat calibration to ensure accuracy, easy to learn and operation. This series of products uses high-precision AD conversion module, so that mixing ratio error between batches (depending on settled proportion ratio) can be controlled within $\pm 0.1\% \sim 0.5\%$. Choosing right model is based on types of material and processing amount per hour. The amount of processing per hour ranges from 90 to 2890 kg/hr.

Features

- All materials are evenly mixed after measuring by gravity, and precision can be strictly controlled;
- Advanced batching technology can accurately control and meter amount of each processed raw material;
- The automatic repeat calibration function will be automatically corrected and adjusted after each weighing to ensure the best batching accuracy;
- Up to 7 kinds of raw materials can be processed at the same time;
- Modular removable structure design, easy to clean;
- With recipe storage function, up to 40 recipes can be stored;
- With alarm history record function;
- The HTGB-1, HTGB-2 and HTGB-5 are machine-mounted type (standard base, manual close plate);
- HTGB-10, HTGB-18 and HTGB-25 are bracket-mounted type (bracket, storage bin, discharge valve and suction box);
- Optional USB data output function, can be saved and record receipt data;
- With RS485 communication interface, can communicate with Haitian injection molding machine to realize centralized monitoring.

Note

- The mixing proportional error refers to difference between settled percentage and actual percentage of each component;
- The gate metering valve is suitable for 5% and above mixing proportion, and mixing proportional error within $\pm 0.3\sim 0.5\%$;
- Screw meter or micrometer are suitable for 0.2% to 0.5% proportion;
- Max batch weight and mixing proportional error mentioned above are based on data obtained by continuous processing of uniform raw material pellets with bulk density 0.65 kg/L and diameter $\phi 3\sim 4$ mm.
- The maximum output will be different according to number of measurement station and proportion;
- Ensuring working pressure of air valve 6kgf/cm²;
- Standard voltage: 3 phase 380VAC, 50/60Hz
- If need to customize special specifications, please contact us for confirmation;
- Product specifications are subject to change without notice

Introduce

HTHS series vertical color mixer is for granular material mixing. It has simple structure, easy to operate, maintenance and clean, process quickly and good mixing performance. It is an ideal mixing equipment, mainly used for mixing plastic materials and also be widely used in plastics, metallurgy, ceramics and other industries.

Features

The barrel body and stirrer blade are made of stainless steel, easy to clean, no pollution;
Safety chain protection device ensure safety of operator and machine;
Thick steel wall, strong and durable;
Uniform mixing completed in a short time, low energy consumption and high efficiency;
Automatic stop device, can be set to automatically stop within 0-15 minutes.

Note

Standard voltage: 3 phase 380V 50Hz;
If need to customize special specifications, please contact us for confirmation; Product specifications are subject to change without notice.

HTAL-600GN

Introduce

HTAL series automatic loader is equipped with stainless steel hoppers, high-efficiency vacuum motors, motor overload protection devices and automatic alarms for lacking of materials. And it has advantages of light, durable, strong suction ability, easy installation and operation.

Features

- The host and barrel separated design, which is safe and easy;
- Microcomputer control processing;
- Control box is separated and easy to maintain;
- Automatic buzzer alarm protection device of lacking of material;
- Separated filter device, easy to clean dust;
- Stainless steel storage barrel, light and durable, easy to clean;
- Europeanization type with RS-485 communication function;
- Europeanization type is equipped with pulse dust clean device to automatically clean dust;

Note

Water-cooled industrial chiller cabinet schematic diagram

Introduce

HTC series industrial chillers are mainly used in plastics industry. It can accurately control temperature of plastic molding dies to shorten molding cycle and speed up product molding;Also suitable for cooling various hydraulic presses to stably maintain oil working temperature;It is also applicable to other industries such as electroplating industry / food industry / electronics industry and bleaching & dyeing industry.The series of chillers can be divided into two types according to structure design: air-cooled and water-cooled, can accurately and stably provide ice water with temperature range of 5 ~ 30 °C (temperature difference less than ± 1 °C), cooling capacity 6,800 to 120,000 kcal /hr.

Features

- Adopting high-quality new design compressors imported from Europe and United States,with famous brand pumps and fans, saving power and durability;
- Unique new design radiator, good heat transfer performance;
- With stainless steel open design water tank, easy to clean and repair;
- Equipped with microcomputer temperature controller, temperature can be controlled precisely within ± 1 °C;
- The machine has functions of automatic replenishment, reverse-phase protection, current overload protection, high-low voltage protection and multiple electronic time delays. When failure occurs, an alarm is issued.
- Dual screw compressors work alternately to effectively balance running time and increase machine life.

Optional Items

Model with R407C environment-friendly refrigerant, multiport shunt, high lift pump, external water tank is optional; HLINK network linking function is optional

The cooling capacity is obtained based on following conditions:

Chilled water outlet temperature 15°C
Cooling water inlet temperature 30°C
Air temperature 35°C

Note

Standard voltage: 3 phase 380V 50Hz.
The selection of model depends on injection molding amount and required cooling capacity.
If need to customize special specifications, please contact us for confirmation.
Product specifications are subject to change without notice.

HTC Industrial screw chiller unit

HTC-AAA-BBB

BBB:
 ASCS=Air-cooled shell evaporator single screw chiller
 ASCD=Air-cooled shell evaporator dual screw chiller
 WSCS=Water-cooled shell evaporator single screw chiller
 WSCD=Water-cooled shell evaporator dual screw chiller

AAA:Compressor power(unit:HP)

HTC:Industrial screw chiller unit

Introduce

HTC screw chiller unit series can provide 5~30°C ice water (temperature difference less than $\pm 1^\circ\text{C}$), There are two types air-cooled and water-cooled according to structure design. And cooling capacity is from 82,300 to 365,840 kcal/hr, which can be widely used in industries where require large refrigeration capacity, This machine adopts international advanced semi-hermetic screw compressor, integration of motor and compressor, no shaft seal leakage, safety, reliability and economy.

Features

The unit is equipped with high quality brand imported semi-hermetic screw compressors which are highly efficient, stable, energy-saving and low-noise;
 100% - 75% - 50% - 25% four-stage cooling amount regulation, which can make current is less impacted and the unit to operate smoothly and saving energy;
 With microcomputer controller specially for cooling and 10" LCD touch screen, all function can be controlled automatically. Friendly human-machine interface, working status instantly displayed and easy to operate;
 Equipped with high efficient shell-tube evaporator, with water-cooled shell-tube condenser or air-cooled finned condenser, which can ensure high efficient operation of the unit;
 The unit is equipped with a number of safety protection functions such as reverse phase and phase loss protection, overcurrent protection, short circuit protection, compressor overheat protection, high or low pressure protection, water flow detection antifreeze protection, four-stage cooling amount operation, and pressure safety valve.
 Configuration of screw chillers is according to actual project conditions. Therefore, required insulation tanks, pumps, and external pipe of the units are selected according to actual application. The standard configuration does not include above components.

Note

The standard voltage : 3 phase 380V 50Hz;
 The selection of model depends on injection molding amount and required cooling capacity;
 If need to customize special specifications, please contact us for confirmation;
 Product specifications are subject to change without notice.

Introduce

HTMC series mold temperature controller is mainly used for maintaining temperature and heating of mold, but also for other areas with same working conditions. The temperature of mold and roller is controlled with high precision degree by heating and cooling device.

Features

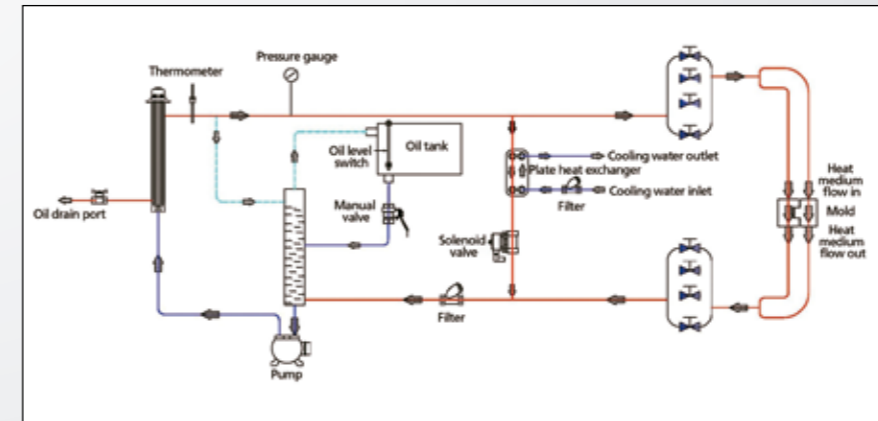

- Microcomputer P.I.D auto-calculation thermostat, digital setting display, accurate and stable.
- With appointment timing function, start-up time is adjustable from 0.1 to 99.9 hours, and the temperature unit can be switched freely between °F and °C.
- High-efficiency water circulation can be applied to circuits temperature controlling of precision molds and small-diameter mold, realizing precise temperature controlling and high-efficiency heat exchange. The internal pipe is made of stainless steel and resistant to high pressure and explosion.
- The electric cabinet is isolated from machine case. Good isolation can prolong service life of electrical parts.
- Equipped with a complete protection function such as power supply reverse phase protection, pump overload protection, over-temperature insulation, and thermal media shortage alarm. When fault occurs, the machine can automatically detect anomaly and notify it through a buzzer alarm.
- With automatic replenishment and exhaust function.
- RS485 communication interface is configured to communicate with host and realizing centralized monitoring.
- Heating and cooling are quick and temperature is stable.

Optional Items

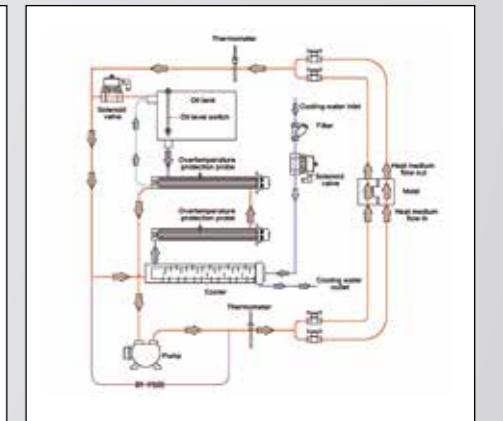

- Safety electronic control circuit can be changed to meet European standard ;
- Optional automatic drainage function, automatically discharge residual heat media in the mold when the mold need to be exchanged, add "L" in the model name;
- Installing water filtration device in front of inlet is optional, add "F" in the model name;
- Optional plug-in PT100, add "PT100" in the model name;

Note

- Voltage specification: 3phase 380V50Hz.
- The selection of model depends on required heating amount.
- If need to customize special specifications, please contact us for confirmation.
- Product specifications are subject to change without notice.

Introduction

HTMC series mold temperature controller is mainly used to maintain mold temperature and heating, but also applies to other fields with same working conditions. Based on principle of boiling point of water will be increased by pressure, the controller chooses ordinary water as heat transfer media which has low viscosity, can realize rapid increasing and maintaining of temperature.

Features

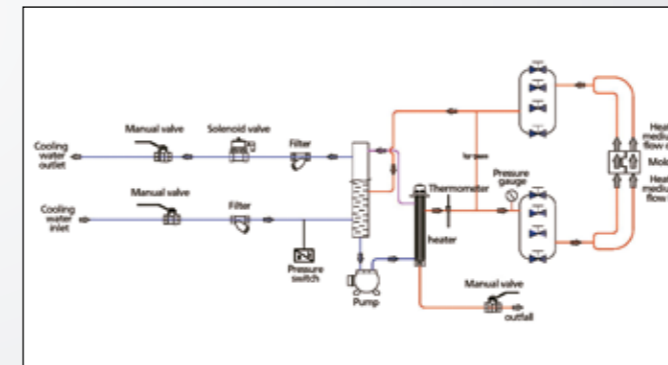

- Microcomputer PID auto-calculation thermostat, digital setting display, accurate and stable.
- With appointment timing function, start-up time is adjustable from 0.1 to 99.9 hours, and the temperature unit can be switched freely between °F and °C.
- High-efficiency water circulation can be applied to circuits temperature controlling of precision molds and small-diameter mold, realizing precise temperature controlling and high-efficiency heat exchange. The internal pipe is made of stainless steel and resistant to high pressure and explosion.
- The electric cabinet is isolated from machine case. Good isolation can prolong service life of electrical parts.
- Equipped with a complete protection function such as power supply reverse phase protection, pump overload protection, over-temperature insulation, and thermal media shortage alarm. When fault occurs, the machine can automatically detect anomaly and notify it through a buzzer alarm.
- With automatic replenishment and exhaust function.
- RS485 communication interface is configured to communicate with host and realizing centralized monitoring.
- Heating and cooling are quick and temperature is stable.

Optional Items

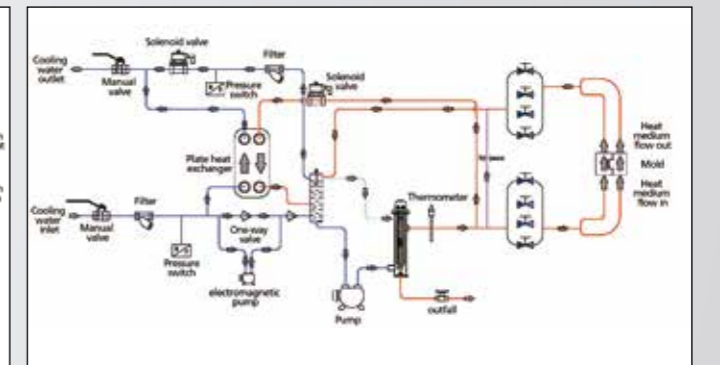

- Optional automatic drainage function, automatically discharge residual heat media in the mold when the mold need to be exchanged, add "L" into the model name;
- Optional water filtration device, add "F" into the model name;

HTGS 250B

No screen, no leakage cutting, good granularity, little powder

Inlet with magnet

Low-speed rolling teeth crusher, flange with dust-proof strip

Double-layer damping soundproof material (optional high port)

Introduce

To achieve dust free performance, HTGS series jaw crusher is equipped with jaw blades and cutting-off blades. The machine is equipped with multiple protection devices for safe operation. This series is suitable for recycling and crushing of degraded materials which is thick, slender or tough.

Features

- With high-quality gear motor, stable performance, long life and large transmission torque;
- The integration of gear cutter and claw cutter can realize coarse and fine grinding at the same time, can be mixed with new materials directly;
- The crushed particles are even and powder content is little;
- Unique transmission design makes machine running more smoothly and with lower noise;
- Precise design saves space and cleaning is quick and easy;
- Motor is easy to replace and maintain;

Note

- Standard voltage: 3 phase 380V 50Hz;
- The maximum crushing capacity depends on material;
- If need to customize special specifications, please contact us for confirmation;
- Product specifications are subject to change without notice.

HTGM180 View

Introduce

HTGM180 series medium speed machine-side crusher is suitable for crushing and recycling various plastic materials, including plastic scraps and regraded material. It is suitable for various soft or hard plastics such as soft chlorine, nylon and ABS. With compact structure and good appearance, the machine is easy to be operated, and optimized design of rotor blade minimize energy consumption and improve cutting efficiency.

Features

When material enters gradually, the rotor blades which are arranged in V-shape cut material smoothly and quickly;
 The spindle runs at a medium speed with low noise and little dust;
 The screen support is easy to disassemble, and it is convenient to change screen and clean material;
 After screw support and hopper is opened, safety switch ensures that spindle does not run and personal safety when changing and cleaning screen;
 Only grinding rake face after rotor blades is blunt and no adjustment is required during installation.
 Only after fixed blades is repeatedly used four times, grinding is required;

Note

Standard voltage : 3 phase 380V 50Hz;
 The maximum crushing capacity depends on screen mash size and material;
 If need to customize special specifications, please contact us for confirmation;
 Product specifications are subject to change without notice.

Introduce

The HTSS series crushers are suitable for crushing different kinds of soft and hard plastics, and smashing different shapes of plastics such as blocks, spheres, bars and degraded material into particles. In plastics industry, it has played an important role in rapid processing and recycling of plastic defects, scrap, and degraded material, and increased utilization of plastics.

Features

For HTSS crusher, Type A and Type B blades are optional. Installed with all-steel blades, and SKD11 blade is optional for enhanced wear-resistant purpose; 800 and above models are equipped with water cooled bearing seat, cart and mobile collection container. Standard configuration includes: overload protection, short circuit protection and shutdown protection of hopper opening; Fan feeding cyclone separator and secondary dedusting system are optional.

Note

Standard voltage: 3 phase 380V 50Hz. The maximum crushing capacity depends on mesh size, material etc. If need to customize special specifications, please contact us for confirmation. Product specifications are subject to change without notice.

Europeanization dryer
HTHD-50EU-P

Europeanization vacuum loader
HTAL-1HP-U-P

HTHD Europeanization dryer series

- Microcomputer can accurately control temperature, full digital P.I.D control, LED status display;
- Overheat protection device can reduce the loss caused by human or mechanical failure;
- Applying principle of air cyclone exhaust and adopting down-blowing hot air to achieve uniform drying effect;
- With seven-day timing function, automatically timing controlling on or off status, 30% power saving efficiency increase compared to normal dryer.

HTZS400-800F

HTZS400-800

HTZS series High duty crusher

Used for crushing of various plastics, rubbers, fabrics, leathers, cardboard, wood and aluminum foils. The shape of material can be film, sheets, tubes, regrind material and various kinds of hollow containers. When amount of crushing is large, it can be equipped with feeding conveyor, suction fan, storage bin and dedusting system.

HTTS600-800F
Note: Inertia flywheel (optional)

HTTS Barrel crusher

Used for crushing and recycling of hollow containers such as various plastic barrels, including drinking water barrels and grease barrels. It has compact structure and easy to operate, professional design of double V cutting mode minimizes energy consumption and higher cutting efficiency.

HTTP800-1200F

HTTP Pellets crusher

Suitable for crushing and recycling pallets, pipes and wide profiles., Eliminating pre-decomposition process of products used in conventional machines, Reducing material degradation, saving labor cost and intensity, Improve crushing and recycling efficiency.
